"There is great craftsmanship and beauty in their work. They made practical choices in selecting different woods for various aspects of the different projects. Their choices allowed the projects to be cost-effective and will allow for long term durability of the finished products."

—Mark McLaughlin, Director, Shaver's Creek Environmental Center

"I love looking at the joints of each post and beam. They're as beautiful as any painting or sculpture."

*—Leslie Demmert,
Centre County Home Owner*

"Our plan included timber frame construction and the use of structural insulated panels for energy efficiency. Envinity turned out to be a great match. They had the energy design expertise, a similar vision, and they were a local company, which was very important to us."

*—Bill Zemaitis
Bedford County Home Owner*

What makes us different? Timber Frame structures from Envinity are created by local craftsmen using locally harvested wood. The framing pieces are larger and sturdier than typically used – 6x6, 6x8, 8x8 and larger, depending on the frame design. The timbers are connected with traditional pegged mortise-and-tenon joinery, which provides you with a rugged, long-lasting frame.

Jerry Learn has more than 15 years of experience working on a wide range of Timber Frame structures. There is no other firm in Central PA that has more experience

than Jerry and Envinity when it involves Timber Frame design and construction.

Envinity provides a full range of Timber Frame services, from ready-to-assemble frames picked up at our shop to full delivery and construction services at your site.

3-D models are created before the frame is crafted
